

# The road to highlights is paved with good intentions: envisioning a paradigm shift in OLAP modeling

Panos Vassiliadis

Patrick Marcel

University of Ioannina, Hellas

University of Tours, France

## Why the need for a paradigm shift?

- After many years of research on efficiency, ETL, highly distr. progr., ..., we have neglected what kind of analysis we offer to end-users
- Unless we provide a principled way to handle end-user operations, the industry will do it before us (again) and in ad-hoc manner (again)
- We envision a **paradigm shift for OLAP**, meaning that we need to ....
- ... Re-invent / Revive / Redefine OLAP with
  - A new model of what a query is
  - A new model of what a query answer is

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

2

Redefining what a query is

## THE INTENTIONAL ANALYTICS MODEL

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

3

## Intentional Analytics model

---

SQL aggregate  
queries

Direct  
implementation in  
SQL at the db level

**At the beginning:**  
**Reporting, but the “kid-who-  
knows-programming”**  
**Focused on**  
**HOW TO GIVE THE BOSS**  
**WHAT I THINK HE NEEDS**

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

4

# Intentional Analytics model

OLAP: Roll-Up, Drill-Down, Drill-Across, Slice

Manipulation at the cube level

**On-line processing, by the user himself, focused on WHAT DATA I NEED**

SQL aggregate queries

Direct implementation in SQL at the db level

**At the beginning: Reporting, but the “kid-who-knows-programming” Focused on HOW TO GIVE THE BOSS WHAT I THINK HE NEEDS**

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

5

# Intentional Analytics model

OLAP: Explain, Predict, Focus, ...

Manipulation at the INTENTION level

**On-line processing, mostly by the tool, focused on WHAT IS THE GOAL OF MY ANALYSIS (data is for the db, Info is for the user)**

“I want the tool, to **explain** to me, why sales are dropping”

OLAP: Roll-Up, Drill-Down, Drill-Across, Slice

Manipulation at the cube level

**On-line processing, by the user himself, focused on WHAT DATA I NEED**

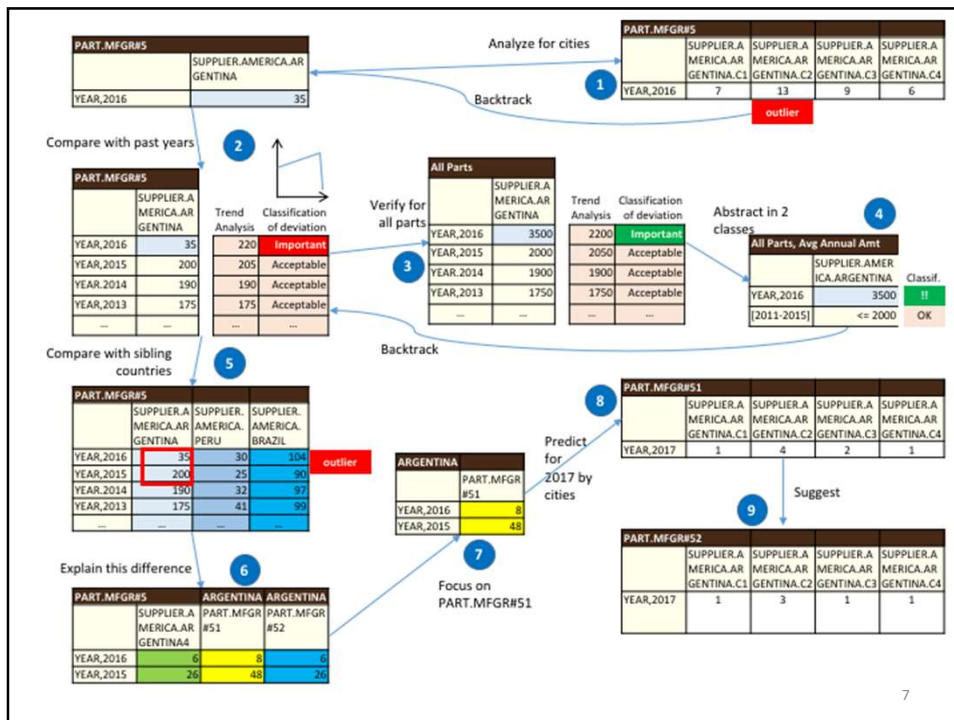

SQL aggregate queries

Direct implementation in SQL at the db level

**At the beginning: Reporting, but the “kid-who-knows-programming” Focused on HOW TO GIVE THE BOSS WHAT I THINK HE NEEDS**

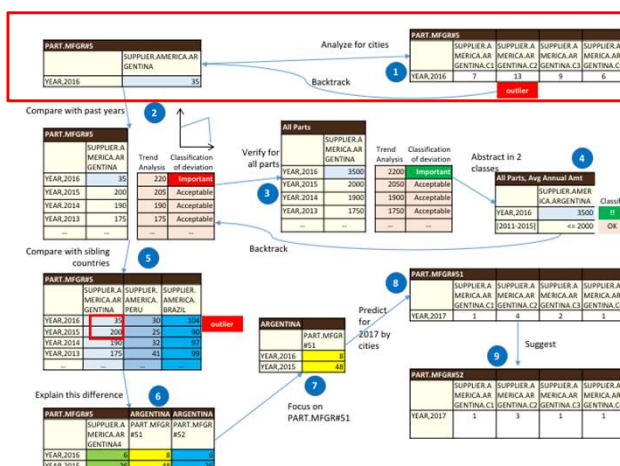

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

6

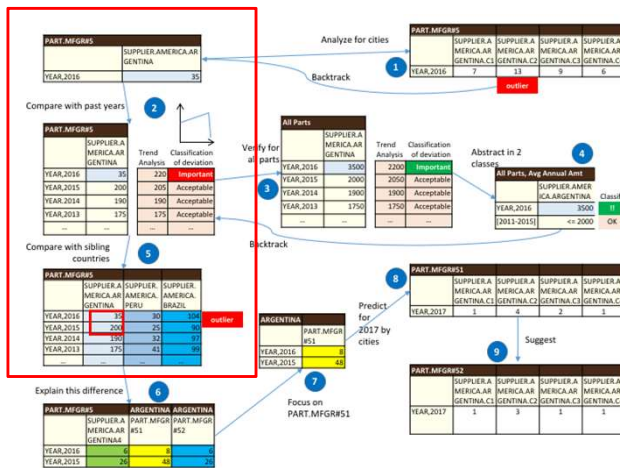

## Operator: Analyze

- **Analyze:** I want details on the data you present
- Implemented via one drill down or all possible (Cinecubes' 'detail' operator)

# Operator: Compare

- **Compare:** contrast a cube/cell with its peer, "similar" cubes/cells
- Implemented via drill across or Cinecubes' 'put-in-context' operator

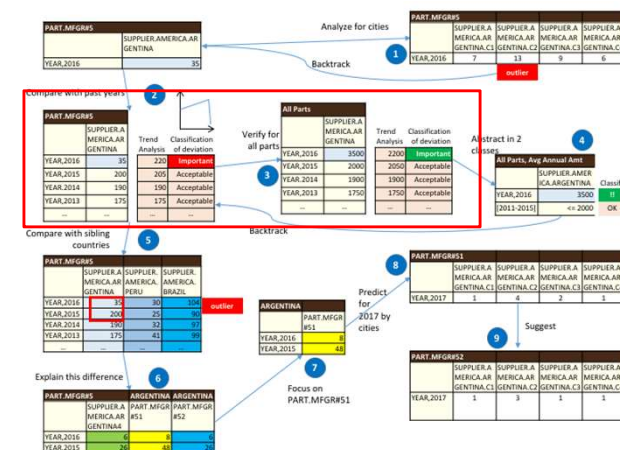

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

9

# Operator: Verify

- **Verify:** check if a pattern you observe happens also at a broader context
- Implemented via Relax operator (observe that the specific part on the left is generalized to all parts at the right)

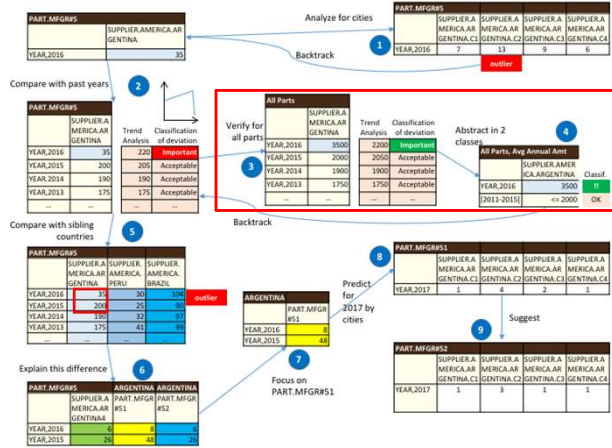

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

10

# Operator: Abstract

- Abstract:** show me less details and a broader context
- Implemented via Rollup, clustering, shrink, etc (here: abstract the year dimension)

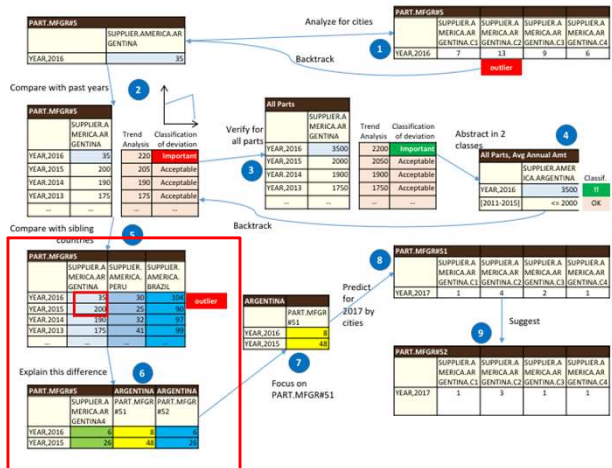

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

11

# Operator: Explain

- Explain:** show me what makes a difference
- Implemented via the Diff operator (here in the Fig.) or outlier detection, etc

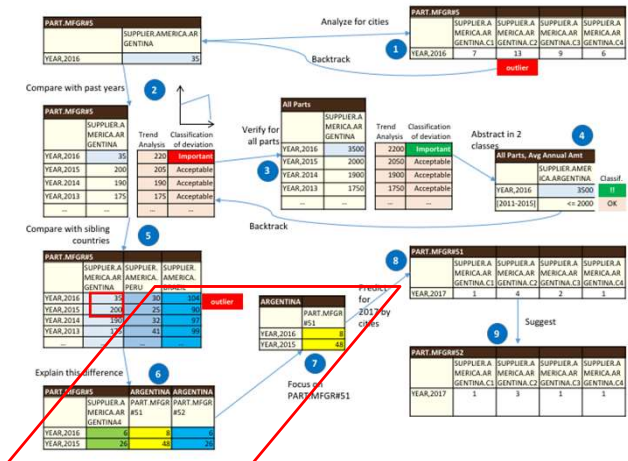

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

12

# Operator: FocusOn

- Focus On:** constrain the scope of analysis
- Implemented via sliceNDice, skyline, winnow (top-k), etc.

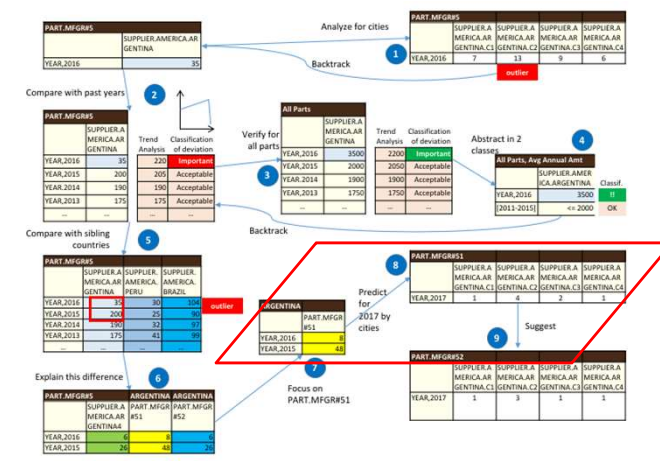

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

13

# Operator: Predict

- Predict:** forecast future values
- Implemented via typical timeseries analysis methods (regression, ARIMA, ...) as well as classification methods

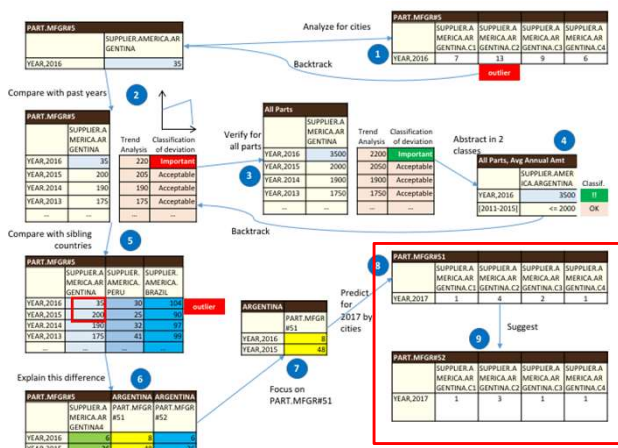

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

14

## Operator: Suggest

- **Suggest:** any hint on what should I ask now?
- Implemented via query recommendation techniques, or via operators like Inform

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

15

## How do we change querying?

- **Focus on the actual goal** of the analyst and NOT on the data she wants to get
- **Let the system decide which data to fetch**
  - OPEN ISSUE: instead of executing EVERY single OLAP operator that corresponds to an intentional operator can we AUTOMATICALLY optimize (a) what we execute and (b) what we show (see next too)
- Also in the paper: vision of a language for composing operators
- **On-Going work: further reduce the set of operators, by abstracting even more!**

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

16

OK, we redefined what an OLAP query is, but this is not enough. We also suggest that we urgently need to ...

## ...REDEFINE WHAT THE ANSWER TO AN OLAP QUERY IS

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

17

Caught somewhere in time

- **Query result = (just) a set of tuples**
- No difference from the 70's when this assumption was established and tailored for
  - what people had available then
    - ... a green/orange monochrome screen
    - ... a dot-matrix(?) printer
    - ... nothing else
  - users being programmers

Photos copied from <http://en.wikipedia.org/>

18

## The answer to a query can be ...

- ... a set of tuples (traditionally)
- ... a **data movie** that includes a set of complementary queries supporting a **data story**, whose results are properly visualized, enriched with textual comments, and vocally enriched (DOLAP13 Cinecubes for reporting)

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

19

## The answer to a query can be ...

- ~~... a set of tuples (traditionally)~~
- ... a **data movie** that includes a set of complementary queries supporting a **data story**, whose results are properly visualized, enriched with textual comments, and vocally enriched (DOLAP13 Cinecubes for reporting)
- ... a **dashboard** that apart from **data**, also comes with (i) the automatic mining of **models** and patterns, and (ii) the extraction of “jewels” hidden in the result, which we call **highlights**, plus, the aforementioned (iii) **visuals** and generated **text** (for OLAP)

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

20

## Data analysis and models

- We consider the plugging of **data analysis algorithms** in the back-stage of a dashboard as an indispensable part of OLAP.
- These algorithms can range ...
  - ... from very simple ones (e.g., finding the top values of a cuboid, or detecting whether a dimension value is systematically related to top or bottom sales)
  - ...to very complicated ones (like, classification, outlier detection, dimensionality reduction, etc).
- The **findings of these** automatically invoked and executed data analysis **algorithms** will be the **models** of the data

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

21

## Data analysis and models

- The findings of automatically invoked and executed data analysis algorithms will be the **models** of the data
- Due to the vastness of the possible models, we need **to automatically assess them on their significance** for the user and retain the most important ones, which we call **highlights**

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

22

## ...and what are models and highlights?

Compare with past years **2**

PART.MFGR#5	SUPPLIER.AMERICA.AR GENTINA	Trend Analysis	Classification of deviation
YEAR,2016	35	220	Important
YEAR,2015	200	205	Acceptable
YEAR,2014	190	190	Acceptable
YEAR,2013	175	175	Acceptable
...	...	...	...

Compare with sibling countries **5**

PART.MFGR#5	SUPPLIER.AMERICA.AR GENTINA	SUPPLIER.AMERICA. PERU	SUPPLIER.AMERICA. BRAZIL	
YEAR,2016	35	30	104	outlier
YEAR,2015	200	25	90	
YEAR,2014	190	32	97	
YEAR,2013	175	41	99	
...	...	...	...	

- **Models:** concise information-rich abstractions that “mine” relationships and properties from data
- Here: (@2) a **trend analysis** of past sales produces a list of “expected” values + a **classification** of deviation of achieved sales compared to the actual, labels the result; (@5) an **outlier analysis** identifies points with high outlieriness

23

## ...and what are models and highlights?

Compare with past years **2**

PART.MFGR#5	SUPPLIER.AMERICA.AR GENTINA	Trend Analysis	Classification of deviation
YEAR,2016	35	220	Important
YEAR,2015	200	205	Acceptable
YEAR,2014	190	190	Acceptable
YEAR,2013	175	175	Acceptable
...	...	...	...

Compare with sibling countries **5**

PART.MFGR#5	SUPPLIER.AMERICA.AR GENTINA	SUPPLIER.AMERICA. PERU	SUPPLIER.AMERICA. BRAZIL	
YEAR,2016	35	30	104	outlier
YEAR,2015	200	25	90	
YEAR,2014	190	32	97	
YEAR,2013	175	41	99	
...	...	...	...	

- **Highlights:** “important” parts of models, linked to data
- Here: (@2) **sales = 35** having a large deviation from expected and classified as “important” is an important part of the model; similarly, (@5) the **outlier** is important too

24

## Model components, data and highlights

- Models have **model components**, that **can link to source data** e.g.,
  - A time series model splits a time series measure to trend, seasonality and noise => the source measure is annotated with them
  - A cluster model = a set of clusters => the source cells can be annotated with the id of the cluster to which they belong.
  - A classification model groups source data by the label of the class to which they belong.
  - A model of top-k values of a measure labels source cells with their rank.
- Components are linked to their respective data:
  - *A notable property of our modeling is that we require model components to be directly mapped and linked to their generating data in a bidirectional mapping, so that the end-user can navigate back and forth between cube cells and their models.*
- **Highlights are produced by identifying components with “interesting” information, according to the user’s intention**

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

25

## Important questions & challenges

Stay tuned for the long version of the paper for ...

... sketch of solutions for:

- How do we select which algorithms to execute, how to fine-tune them, and how do we do it in real time?
- How do we select highlights out of the vast number of models generated?
  - Must investigate interestingness wrt intention

... solutions for:

- How do we handle the heterogeneity of models?
- How do we put data and highlights to work together?

... open for the future:

- How do we plug in (a) visualizations and (b) storytelling?

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

26

## Concluding, we ...

- ... redefine what **an OLAP query** must be & propose...
  - Intention queries via **intentional operators**, that the user can use instead of R-UP's, DD's with more ease
  - *Compare, Analyze, Explain, Predict, Verify, Focus, Abstract, ...*
- ... redefine what **the answer to an OLAP query** must be = a dashboard with ...
  - Data from several data cubes
  - Models with information-rich properties/relationships
  - Highlights with interesting pointsOfFocus
  - Visuals and Generated Text
- ... **encourage & invite the community to actively pursue this research avenue now!**

[http://www.cs.uoi.gr/~pvassil/publications/2018\\_DOLAP](http://www.cs.uoi.gr/~pvassil/publications/2018_DOLAP)

**Thank you!**
