

Call for Abstracts

EURO 2012 : Special Sessions on Preference Learning

We are organizing for the third time a stream of invited sessions on "Preference Learning" at the European Conference on Operational Research (EURO 2012) in Vilnius, Lithuania, July 8-11, 2012 (see <http://www.euro-2012.lt>).

With the invited sessions we want to bring together researchers that have been working on preference learning and related research topics in operations research, machine learning, multicriteria decision making, preference modeling, data mining and statistics. The EURO 2012 conference offers the perfect forum for that, since in previous editions it attracted thousands of participants with diverse backgrounds in operational research.

Novel research, recently published work, an application or presentation of a challenging unsolved problem in preference learning would be appropriate for a talk.

Sponsored by the EURO Working Group on Multicriteria Decision Aiding.

Participation is by invitation.

Please contact us if you want to contribute to these special sessions!
