Abstract. This text was prepared for a session devoted to Polish-born Computer Scientists, who live and work abroad. This session was to be a part of the 3rd Congress of Polish Informatics, but it was later removed from the schedule. Unfortunately, this text was also not included in the 16th issue of ProDialog, as it was delayed crossing the Atlantic. So, with a bit of a delay, here are my reflections on my professional development as a computational scientist.

Key words: parallel computing, parallel computing history, agent-based computing
